

Table of Content

Executive summary	1
1. Introduction	5
1.1 COST Framework	5
1.2 Objectives of COST Action 353	5
1.3 Work programme & organisation of the action	6
1.4 Acknowledgements	10
2. Service levels for increased safety and quality	11
2.1 Synthesis on the optimum service or quality levels for different road environments and climatic regions	11
2.1.1 Pattern of the settlement	11
2.1.2 Network	12
2.1.2.1 Typologies of the network	12
2.1.2.2 Evaluation of the traffic	16
2.1.2.3 Flow of goods transported by road in Europe	17
2.1.3 Synthesis of the existing level of service	19
2.1.3.1 Definition of the level of service	19
2.1.3.2 Principle of assignment	19
2.1.3.3 Safety	20
2.1.3.4 Fluidity	20
2.1.3.5 Reliability of the itinerary	20
2.1.3.6 Driving comfort	20
2.1.3.7 Integration of the road in the human environment	21
2.1.3.8 Integration of the road in the natural environment	21
2.1.3.9 Support and promotion of the activities of the area	21
2.1.3.10 Increase in the total advantages of the users and the public power	21
2.1.3.11 Reduction of the total economic cost	22

2.1.3.12	Reduction of exploitation and maintenance costs of the road	22
2.1.4	Principle of assignment of the level of service	22
2.2	Assessment of the benefits and cost of the European winter service	24
2.2.1	Driver Behaviour in Winter Time	24
2.2.1.1	Effects of Snow and Ice on the Surface and Driving Conditions	24
2.2.1.2	Driver behaviour and its consequences	31
2.2.2	Effects of Winter Maintenance on Traffic Safety	34
2.2.2.1	Analysis of Traffic Safety in Winter Time	34
2.2.2.2	Effects of Winter Road Conditions and Winter Service on Traffic Safety	36
2.2.2.3	Traffic Safety on non-salted roads	41
2.2.3	Socio-economic costs	42
2.2.4	Winter maintenance for pedestrians and cyclists	45
2.2.5	Success of the Improvement of Road Winter Maintenance	46
2.2.6	Summary on the effects on the Winter Maintenance	47
2.3	Agreement on the specification of the European winter service to produce the quality and the service levels in different climatic regions	49
2.3.1	European Winter Road Maintenance Policy	49
2.3.2	Climatic criteria review	50
2.3.3	Technical frame to provide a "common methodology"	55
2.3.4	General technical framework	55
2.3.4.1	Structural network or LEVEL 1 network	55
2.3.4.2	Secondary network or LEVEL 2 network	56
2.3.5	The main winter operation treatments within the on site maintenance centre	56
2.3.6	What about weather conditions or climatic areas ?	57
2.3.7	Turnout time	60

3.	New and emerging technologies	61
3.1	General Approach	61
3.2	Technologies with a potential for improvements in maintenance and network safety	62
3.2.1	Identification of fields of EMERGING technologies	62
3.2.1.1	Airports	63
3.2.1.2	Building, civil technologies	64
3.2.1.3	Chemical analysis	64
3.2.1.4	Emergency services	65
3.2.1.5	Farming technologies	65
3.2.1.6	Food technology	66
3.2.1.7	ICT/ITS	66
3.2.1.8	Logistics	66
3.2.1.9	Motor vehicle industry	67
3.2.1.10	Nanotechnology	67
3.2.1.11	New materials	68
3.2.1.12	Road side and mobile equipment	68
3.2.1.13	Space technology (remote sensing)	69
3.2.1.14	Waste & Recycling Industry	69
3.2.2	Identification of NEW technologies	70
3.3	Progress of technologies and applications	70
3.3.1	Technologies in limited use in winter maintenance	72
3.3.1.1	Road Infrastructure	72
3.3.1.2	RWIS	73
3.3.1.3	Ice & Snow Removal	82
3.3.1.4	Surface Condition Assessment	83
3.3.1.5	Web-based in-car navigation	91
3.3.1.6	Maintenance Centres	92
3.3.1.7	De-icing Materials	93

3.3.1.8	Equipment	94
3.3.1.9	Road User Information	96
3.3.1.10	Safety Measures - Avalanche protection and information	99
3.3.2	Technologies available for implementation	102
3.3.2.1	Ice & Snow Removal	102
3.3.2.2	Equipment	103
3.3.3	Technologies needing adaptation	103
3.3.3.1	Surface Condition Assessment	103
3.3.3.2	Maintenance Centers	104
3.3.3.3	Equipment	104
3.3.3.4	Road User Information	105
3.3.4	Technologies needing further research	106
3.3.4.1	Road Infrastructure	106
3.3.4.2	Spreading Technology	107
3.3.4.3	Surface Condition Assessment	107
3.3.4.4	Materials	108
3.4	Summary and conclusions	109
4.	Winter Maintenance Management Systems (WMMS)	111
4.1	Definition of the components of WMMS	111
4.2	Evaluation of existing systems	117
4.2.1	Method of evaluation	117
4.2.2	Comparison of different systems from evaluation tables of different systems/countries	117
4.2.3	Description and evaluation summary	120
4.2.3.1	Road Weather Information Systems	120
4.2.3.2	Administrative System	123
4.2.3.3	Call-out System	126
4.2.3.4	Intelligent Equipment	129

4.2.3.5	Documentation and follow-up	132
4.2.3.6	Traffic management and information	134
4.3	Special winter maintenance management methods and technologies related to increased traffic safety	136
4.3.1	Special requirements for WMMS in urban areas	136
4.3.2	Traffic control based on weather data & Variable message signs	141
4.3.2.1	Introduction	141
4.3.2.2	Weather related traffic control	141
4.3.2.3	Variable message signs	142
4.3.2.4	Safety impacts of weather-related traffic control	144
4.3.3	Traffic management in extreme climatic conditions	146
4.3.3.1	Introduction	146
4.3.3.2	Protocols and operational plans	146
4.3.3.3	Meteorological situations	148
4.3.3.4	Emergency parking areas	150
4.3.3.5	Recommendations to road users	152
4.3.3.6	Annex	153
4.3.4	Traffic Message Channel for information transmission to road users	155
4.4	New developments for winter maintenance management	156
4.4.1	Road weather monitoring and forecasting system	156
4.4.2	Local climatic model maintenance decision tool	159
4.4.3	Use of Javamap RWIS	160
4.4.4	Infrared controlled spreading	163
4.4.5	Automated salt spreading by means of GPS	163
4.4.6	Example Canton Lucerne	167
4.5	Recommendations for an efficient system	170
4.5.1	Road Weather Information System (RWIS)	170
4.5.2	Administrative system	171

4.5.3	Call-out system	172
4.5.4	Intelligent equipment	173
4.5.5	Documentation and follow-up	175
4.5.6	Traffic management and information	176
5.	Conclusions and Recommendations	177
5.1	Recommendations for optimizing winter service and road safety in Europe	177
5.2	Recommendations for research and development	179
5.2.1	Approach	179
5.2.2	Most relevant research topics	180
5.2.2.1	Monitoring road surface condition	180
5.2.2.2	De-icing materials and their effects	181
5.2.2.3	Winter maintenance (training, guidelines, urban vs. rural)	182
5.2.2.4	Effects of weather on drivers and flow maintenance	182
5.2.2.5	ITS solutions	182
5.2.2.6	Optimal winter strategies considering global warming	183
5.2.2.7	Winter service for pedestrians, cyclists and other unprotected road users	184
5.2.3	Proposed research tasks	185
